$\beta$ -lactams are a broad class of antibiotics and include penicillins, cephalosporins, carbapenems and monobactams. Some individuals experience adverse immunological responses or allergic reactions to  $\beta$ -lactams. Because of the structural similarity between these antibiotics, those who are allergic to one class of agents may manifest cross-allergenicity when exposed to a member of another class.

TOKU-E Company assumes this chemical has the potential to induce an allergic reaction in some individuals. To the best of our knowledge, the correlation between this specific material and respiratory or skin sensitization has not been thoroughly investigated.
